On the left is a navigation sidebar with options: Cloud Object Storage, Storage instances, Cloud Object Storage-si, Buckets (selected), Integrations, Endpoints, Usage details, Service credentials, Connections, and Plan. The main content area is titled 'Buckets' and includes a description: 'Buckets serve as containers for objects, and can be individually configured in terms of their location, resiliency, billing rates, security, and object lifecycle rules.' Below this is a table of existing buckets. The table has columns for Name, Public access, Location, Storage class, and Created. Two buckets are listed: 'containment' and 'p-na-r-b'.
